

LUNGTALANANA FIRE AND VEGETATION HISTORY

RESEARCH PROJECT 2014-2017

PRESENTATION TO THE ABORIGINAL COMMUNITY

23rd August 2017 -TAC 182 Charles St Launceston 10:30am

A project undertaken by the Tasmanian Aboriginal Centre with the University of Tasmania and the Australian National University. The project is looking at sediments from lagoons to examine charcoal and pollen records. The findings to date show these sediments contain a very long record of fire and vegetation history. The findings are significant and are to be presented to the Aboriginal community by researcher Simon Haberle (ANU). There is also interest in undertaking further research on Cape Barren Island. **Come along to find out more and join the discussion.** For more information contact Andry Sculthorpe at the TAC andry.s@tacinc.com.au, 0410237404
